

Serial No. 10/506,480  
Examiner Noakes  
Group Art Unit 1656

IN THE SPECIFICATION:

Please delete paragraph [0008] and replace with the following paragraph:

[0008] All known fusion partners that bind to the streptavidin containing the amino acid sequence HPQ, the so-called HPQ binding motif coming into interaction with the biotin-binding pocket of the streptavidin. To the already known peptides belong the so-called Strep-tag I:  $\Delta$ WRHPQFGG [SEQ ID NO: 18] with a dissociation constant of  $K_d$  of 10 – 37  $\mu$ M, the so-called Strep-tag II: WSHPQFEK [SEQ ID NO: 19] with a dissociation constant  $K_d$  of 18 – 72  $\mu$ M, and the so-called SBP-tag:

MDEKTTGWRGGIIVVEGLAGELEQLRARLEHH ·PQQQREP [SEQ ID NO: 20] with a dissociation constant  $K_d$  of 2.5 nM. In contrast to the two short Strep-tags I and II, the longer SBP-tag has a substantially stronger binding to the streptavidin. However, as mentioned above, the function of the defined protein is particularly affected with increasing length of the fusion partner. Further, particularly long fusion partners disturb the crystallization of the defined proteins.
